

Smart Guard Control activation for remote control via mobile device or web browser

Smart Guard Control application can be download for Android devices from Google Play or by scanning this QR code:

For using via web browser, it can be access following this link:
<https://cloud.smart-hitech.eu/>

Activation steps:

- 1) Start the Smart Guard Control application or log in to the following link: <https://cloud.smart-hitech.eu/>
- 2) Create a new user (if you do not have registered one), following the steps in the application. You have to enter a valid e-mail;
- 3) You will receive an e-mail with a confirmation link to complete the registration;
- 4) After confirming the registration, you can log in with your username (the registered e-mail) and password;

After successful login, you can add all your control panels. In order to do this, you will need:

1. Each control panel serial number – it is located on the top of the panel's PCB but you can find it from the keypad's menu options.

2. Cloud password (PIN)

3. Cloud pairing code – can be generate by the Master or Engineer user only!

ATTENTION: To make all this possible, you have to allow the connection to the Cloud system into the control panel.
